Denise Allyson Cole, Deputy Minister, Ministry for Seniors and Accessibility
Greg Meredith, Deputy Minister, Ministry of Labour, Training and Skills Development

SUBJECT: Update regarding Directive 5

We are writing to hospitals, long-term care homes and retirement homes to provide an update regarding Ontario's Directive 5 in light of the change to the definition of an outbreak in long-term care homes and retirement homes implemented April 7, 2021.

Directive 5 is the provincial baseline standard for provision of personal protective equipment (PPE) for hospitals, long term care homes and retirement homes. The change in definition of outbreak is intended to have no limiting impact on worker access to N-95 respirators and PPE outlined in Directive 5.

Directive 5 is intended to ensure that all workers can access a fit tested N-95 respirator if deemed necessary based on a point of care risk assessment (PCRA) conducted by a regulated health professional. Where a facility is in outbreak, unregulated workers can conduct a needs assessment instead of a PCRA to assess if they need access to a fit tested N-95 respirator. The October 8 version of Directive 5 outlined:

- “For public hospitals and long-term care homes in COVID-19 **outbreak**, as declared by the local Medical Officer of Health, if a health care worker comes in contact with a suspected, probable or confirmed case of COVID-19 in a patient or resident where 2 metre distance cannot be assured, the health care worker can determine if a fit-tested N-95 respirator or approved equivalent or better protection is needed and must receive this additional precaution.” (Emphasis added)

Starting December 9, 2020 and prior to the change implemented April 7, 2021, “outbreak” was defined in Directive 3: “LTCHs must consider a single, laboratory confirmed case of COVID-19 in a resident or staff member as a confirmed respiratory outbreak in the LTCH.”

The new definition of outbreak in long-term care homes and retirement homes is two or more lab-confirmed COVID-19 cases in residents and/or staff (or other visitors) in a home with an epidemiological link, within a 14-day period, where at least one case could have reasonably acquired their infection in the home. Examples of reasonably having acquired infection in a home include:

- No obvious source of infection outside of the long-term care home/retirement home setting; OR
- Known exposure in the long-term care home/retirement home setting.

In addition, a suspect outbreak in these settings is defined as one single lab-confirmed COVID-19 case in a resident.

In order to support continued access to N-95s despite the change in definition of outbreak, the Chief Medical Officer of Health has updated Directive 5 regarding the assessment process for workers:

- “For public hospitals in COVID-19 outbreak, as declared by the local Medical Officer of Health, and for long-term care homes **with one laboratory-confirmed case of COVID-19 in a staff member or resident**, if a health care worker comes in contact with a suspected, probable or confirmed case of COVID-19 in a patient or resident where 2 metre distance cannot be assured, the health care worker can determine if a fit-tested N-95 respirator or approved equivalent or better protection is needed and must receive this additional precaution.” (Emphasis added.)

We are also writing to provide a further reminder regarding Directive 5 implementation.

In our collective efforts to fight the COVID-19 pandemic, healthcare workers are the most important resource Ontario has. It is essential that they are afforded the respect and consideration by ensuring that they are provided with the protective equipment that is necessary for them to do their jobs safely.

As a reminder to employers, there is no requirement for an additional process to access N-95 respirators beyond the assessment process outlined in Directive 5. Hospitals, long-term care homes and retirement homes must ensure that in all facilities and during all shifts, N-95 respirators and other PPE are readily accessible to workers based on a PCRA or needs assessment, without the employee having to request access. In order to support this access, it is essential that hospitals, long term care homes and retirement homes eliminate any physical or procedural barriers that may reasonably be expected to prevent an employee from accessing enhanced PPE if they require enhanced PPE.

In other words, while the PCRA or needs assessment is still the appropriate path for determining what PPE is required, there should be no subsequent process to then access that PPE.

Public Health Ontario has identified three variants of concern (VOCs) that are currently present in Ontario. While these VOCs may be associated with increased transmissibility, the [interim guidance from Provincial Infectious Diseases Advisory Committee](#) is that there is no recommended change in PPE practices related to the emergence of VOCs in Ontario. We continue to expect employers to follow the most current guidance from Public Health Ontario and Provincial Infectious Diseases Advisory Committee.

In exercising your stewardship of PPE supplies, we assure you that the current provincial stockpile and supplier inventory of PPE is sustainable and able to meet the needs of Ontario's hospitals, long-term care homes and retirement homes. The government continues to monitor the supply of PPE and is taking steps to ensure adequate supply through the spring and summer. If employers are having difficulty securing adequate supplies of N-95 respirators, they are encouraged to access provincial stockpiles following the steps described in Appendix A, below. They are also reminded about access to fit testing resources for hospitals, long-term care homes and retirement homes, please refer to Appendix B, below.

The provision and correct use of PPE is one part of successful occupational health and infection prevention and control (IPAC) practices. The ministries recognize that there may be new workers on site at any given time, requiring a process of fit-testing as well as continued training and on-site information resources and guidance about PPE access and IPAC practices. For access to IPAC expertise, employers can engage their local IPAC hub or contact EOCoperations.moh@ontario.ca.

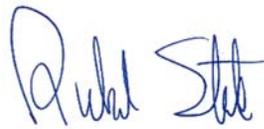

Health care workers are the most important resource Ontario has in our response to the COVID-19 pandemic.

Thank you for your continued commitment to their safety.

Sincerely,

Helen Angus

Richard Steele

Appendix A: Supports for Requesting Alternate or Emergency Supplies of N95s

For organizations that have not exhausted all efforts to conserve supplies and procure their own stock through the established escalation process:

For hospitals, retirement homes or long-term-care homes that are looking to expand alternate inventories to obtain Personal Protective Equipment (PPE) – employers can access the [Workplace PPE Supplier Directory](#).

For organizations that have exhausted all efforts to conserve supplies and procure their own stock through the established escalation process:

Organizations can request their emergency N95 supply through the Critical Personal Protective Equipment (PPE) and Swab Kit: Intake Form that is typically used for requests for critical PPE.

The Critical Personal Protective Equipment (PPE) and Swab Kit: Intake Process for Central, North, Toronto and East Region is outlined below:

1. Complete the Urgent Pandemic Supply Request on behalf of your long-term care home, retirement home or hospital ([eHealth Ontario | It's Working For You](#)). Requests should be issued for single sites only (i.e., requests will be accepted individually for each long-term care home, retirement home or hospital, rather than groups). Complete the intake form to the best of your ability – irrelevant fields will be disregarded as requests are reviewed and processed.
2. Select your organization type and check the “Personal Protective Equipment” box and confirm that your organization has a supply shortage of under 14 days of stock despite following the Ontario Health escalation process.

What will you be requesting today?

Personal Protective Equipment

NOTE: The statement below should be selected in order to proceed.

By selecting this box, your organization confirms it still has a supply shortage of under 14 days of stock despite following Steps 1-3* and requires PPE from the pandemic stockpile to continue providing services. Additionally, I have verified or will verify and confirm that any Personal Protective Equipment (PPE) I receive from Ontario Health will remain in Ontario, and will be used for direct patient care. Further, the PPE received will not be resold or redistributed without the express written consent of Ontario Health.

3. Complete your ‘Organization Details’, ‘Requestor Details’ and ‘Shipping Details’.
4. Under ‘Item Type’ select N95 Mask for Regular Supply
5. Select the mask type you are ordering under ‘Description’. Note that you may request multiple models of the three that are available (3M 8210, Halyard Fluidshield 46726, Halyard Fluidshield 46827).
6. Indicate the number of staff who are using the specific N95 model requested within a given 24-hour period. Note that fit testing and user training is required prior to use.

Please indicate the number of staff who require this model of respirator per day (i.e. 24-hour period) *(This is defined as a Health Care Worker or Regulated Health Professional who delivers care to suspected, probable or confirmed COVID patients. Per IPAC guidelines, homes should cohort patients with suspected, probable or confirmed COVID-19, assign designated teams of health care providers, and batch patient encounters to help conserve the use of PPE.)**

0

This number should reflect the number of patient-facing clinical staff that are working on site per day (i.e. 24-hour period); it does not refer to the total number of Full-Time Equivalents at your organization)

7. Complete the remainder of the form, ensuring that all mandatory form fields have been completed prior to submitting the form. Mandatory fields that are not relevant to this allocation will be disregarded.
8. Confirm ability to receive aged, donated, or expired product. Note that this product is provided for use during fit testing only and is not intended for regular use. Please also be advised that a waiver is required to be submitted for this request. The provider will receive a copy of the waiver (Agreement for Expired or Donated PPE) in the automated email generated upon submission of this request.

Certain PPE is only available in the Provincial Stockpile as either aged, expired or donated. When requests are being assessed, providing PPE that is not aged, expired or donated will always be the first option considered. In those cases where that is not an option for the PPE requested, please confirm if your organization is willing to receive aged, expired or donated supplies below.

Aged Donated Expired No

9. The Ontario Health regions will review incoming requests, assess for reasonableness, and escalate to the MOH. Product will be provided using an ethical approach. Organizations may expect regions to follow-up on requests for clarification.
10. Orders may take 5-10 days to ship, however delays may be expected depending on volumes. Shipments to homes or hospitals currently in outbreak will be prioritized.

The Urgent Pandemic Supply Request Process for organizations in the West Region is outlined below:

1. Complete the Urgent Pandemic Supply Request on behalf of your long-term care home, retirement home or hospital ([eHealth Ontario | It's Working For You](#)). Note: Please select "Critical Personal..... **With WEST LHIN(s)**". Requests should be issued for single sites only (i.e., requests will be accepted individually for each long-term care home, retirement home or hospital, rather than groups). Complete the intake form to the best of your ability – irrelevant fields will be disregarded as requests are reviewed and processed.
2. Select "PPE Order Forms".
3. Go to the heading 'Option 3 – Additional Programs or Allocations'.
4. To request N95s, go to the heading 'Option 3 – Additional Programs or Allocations' and select "N95 Respirator Order Form"
5. Complete the Consent, General, and Contact Detail pages. Select your organization type and check the "Personal Protective Equipment" box and confirm that your organization has a supply shortage of under 14 days of stock despite following the Ontario Health escalation process.

What will you be requesting today?

Personal Protective Equipment

By selecting this box, your organization confirms it still has a supply shortage of under 7 days of stock despite following Steps 1-3* and requires PPE from the pandemic stockpile to continue providing services. Additionally, I have verified or will verify and confirm that any Personal Protective Equipment (PPE) I receive from Ontario Health will remain in Ontario, and will be used for direct patient care. Further, the PPE received will not be resold or redistributed without the express written consent of Ontario Health.

6. Complete your 'Organization Details', 'Requestor Details' and 'Shipping Details'
7. Under 'Item Type' select N95 Mask for Regular Supply
8. Select the mask type you are ordering under 'Description'. Note that you may request multiple models of the three that are available (3M 8210, Halyard Fluidshield 46726, Halyard Fluidshield 46827).
9. Indicate the number of staff who are using the specific N95 model requested within a given 24-hour period. Note that fit testing and user training is required prior to use.

Please indicate the number of staff who require this model of respirator per day (i.e. 24-hour period) *(This is defined as a Health Care Worker or Regulated Health Professional who delivers care to suspected, probable or confirmed COVID patients. Per IPAC guidelines, homes should cohort patients with suspected, probable or confirmed COVID-19, assign designated teams of health care providers, and batch patient encounters to help conserve the use of PPE.)**

0

This number should reflect the number of patient-facing clinical staff that are working on site per day (i.e. 24-hour period); it does not refer to the total number of Full-Time Equivalents at your organization)

10. Complete the remainder of the form, ensuring that all mandatory form fields have been completed prior to submitting the form. Mandatory fields that are not relevant to this allocation will be disregarded.
11. Confirm ability to receive aged, donated, or expired product. Note that this product is provided for use during fit testing only and is not intended for regular use. Please also be

advised that a waiver is required to be submitted for this request. The provider will receive a copy of the waiver (Agreement for Expired or Donated PPE) in the automated email generated upon submission of this request.

Certain PPE is only available in the Provincial Stockpile as either aged, expired or donated. When requests are being assessed, providing PPE that is not aged, expired or donated will always be the first option considered. In those cases where that is not an option for the PPE requested, please confirm if your organization is willing to receive aged, expired or donated supplies below.

Aged Donated Expired No

12. The Ontario Health regions will review incoming requests, assess for reasonableness, and escalate to the MOH. Product will be provided using an ethical approach. Organizations may expect regions to follow-up on requests for clarification.
13. Orders may take 5-10 days to ship, however delays may be expected depending on volumes. Shipments to homes or hospitals currently in outbreak will be prioritized.

Appendix B: How to Access N95 Fit Testing

The below continuum of actions can be taken to secure fit test support:

1. Train an in-house fit tester to support ongoing fit test needs
2. Engage an external fit test service
3. Request fit test support through the Critical PPE Escalation Portal (applicable to LTC and RH sectors only)

1. Train an in-house fit tester who can support ongoing fit test needs

As the provincial stock will continue to vary subject to global supply constraints, local demand, and disease prevalence, it is highly encouraged that hospitals, retirement homes and long-term care homes identify individuals to become designated fit-testers and participate in train the trainer education, which is delivered by Public Services Health & Safety Association (PSHSA) - <https://www.pshsa.ca/courses/training-the-fit-tester-for-respiratory-protection-distance-learning-training-program>. Trainees must have access to a fit testing kit to conduct the training and to deliver fit testing to staff. This option allows ongoing fit testing to be conducted in-house in case availability of respirators shifts to new models.

Masks for the purposes of fit testing can be requested through the [Critical PPE Escalation Portal](#). Please use the correct link for the West Region vs. the common link for the Toronto, Central, North and East regions. The province will send respirators for fit testing that are in sustainable volumes of supply, so that, if required, organizations can request product from the province for regular use. Note: expired masks may be sent to support fit testing.

2. Engage an External Fit Tester

A list of organizations in Ontario that provide fit test services is at the end of this document. This list is not exhaustive and includes only examples of vendors that providers may contact for fit test services. Employers who require fit testing for their staff are encouraged to contact one of these vendors or to identify another qualified service provider to schedule an appointment. N95 respirator supply to support fit testing can be requested through the [Critical PPE Escalation Portal](#).

Please note employers are responsible for the cost of fit testing.

3. Request fit test support through the Critical PPE Escalation portal

Long-term care homes and retirement homes can request fit test support through the Critical Personal Protective Equipment (PPE) and Swab Kit: Intake Form that is typically used for requests for critical PPE.

The Critical Personal Protective Equipment (PPE) and Swab Kit: Intake Process for all regions is outlined below:

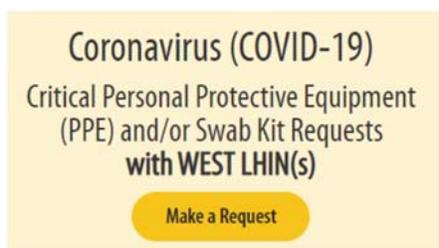

- i. Complete the Critical Personal Protective Equipment (PPE) and Swab Kit: Intake Form on behalf of your long-term care home or retirement home ([eHealth Ontario | It's Working For You](#)). Requests should be issued for single sites only (i.e., requests will be accepted individually for each long-term care home or retirement home, not groups). Complete the intake form to the best of your ability. Note that certain mandatory fields may not be applicable to this program. For example, this checkbox below must be selected in Remedy to proceed, as it is an attestation to your consent however it is not relevant to this program.

By selecting this box, your organization confirms it still has a supply shortage of under 14 days of stock despite following Steps 1-3* and requires PPE from the pandemic stockpile to continue providing services. Additionally, I have verified or will verify and confirm that any Personal Protective Equipment (PPE) I receive from Ontario Health will remain in Ontario, and will be used for direct patient care. Further, the PPE received will not be resold or redistributed without the express written consent of Ontario Health.

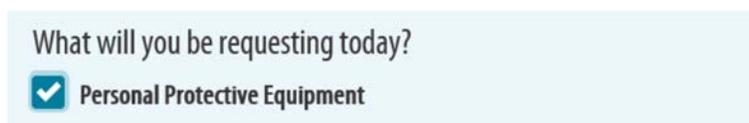

- ii. For organizations in the Central, North, Toronto and East Region, select “Make a Request” in the LHIN-agnostic box.

- iii. For organizations in the West Region, select “Make a Request” in the box specified for West LHINs.

- a. Select “PPE Order Forms”.
 - b. Go to the heading ‘Option 3 – Additional Programs or Allocations’.
 - c. To request N95s, go to the heading ‘Option 3 – Additional Programs or Allocations’ and select “N95 Respirator Order Form”.
- iv. Under “General”, select your organization type and check the “Personal Protective Equipment” box.

- v. Complete your 'Organization Details', 'Requestor Details' and 'Shipping Details'.
- vi. Select "N95/Respirator Fit Testing Support" under item type.
- vii. The "N/A" under the Description field will be pre-selected for this Item Type.
- viii. Indicate the # of staff that require fit testing under "Quantity".

Item Type:	Description:	Quantity: (Number of Staff)	Preferred Timeline: (Please note priority response is in effect)
N95/Respirator Fit Testing Support	n/a	40 <small>(It is important to note the total number of staff that require fit testing, not the total number of staff you have employed)</small>	5 Days

- ix. Indicate "Yes" if your organization requires a supply of N95s to fit test staff to or "No" if you have supply on hand to accommodate staff fit testing.

Do you require a supply of N95 respirators (including elastomeric and other respirators)? (Please note: There is a cost for fit testing services that must be covered by your home/hospital. The cost will be determined once your needs are reviewed.)

Yes No

- x. Indicate whether you will require user training of staff to use the respirators.
- xi. Complete the rest of the form to the best of your ability, ensuring that all mandatory form fields have been completed.
- xii. Your organization will receive an email from Ontario Health with more information on the Fit-Testing Support Process.
- xiii. Requests will be prioritized according to need and you will be contacted by Levitt Safety for an initial consultation.

After your request has been submitted

- xiv. If you require N95 supply, **please request supply to conduct fit testing AFTER you have been contacted for an initial consultation by Levitt Safety.** Your needs will be assessed, and you will be instructed to submit an additional request for N95s for fit testing through the Critical Personal Protective Equipment (PPE) and Swab Kit: Intake Form.
- xv. Once this consultation has occurred, complete Critical Personal Protective Equipment (PPE) and Swab Kit: Intake Form on behalf of your site.
- xvi. Select "N95 Mask for Fit Testing" under Item Type.

- xvii. Select the Item Type and quantity to request as discussed during your consultation. You will likely have to issue multiple requests to select the products you have been instructed to order by Levitt Safety.

Item Type:	Description:	Quantity: (Number of Staff)	Timeline Required: (Please note, only items with less than 7 days on hand can be submitted through this intake process.)
N95 Mask for Fit Testing	Halyard Fluidshield 46727	40 <small>(It is important to note the total number of staff that require fit testing, not the total number of staff you have employed)</small>	5 Days

- xviii. Confirm ability to receive aged, donated, or expired product. Note that this product is provided for use during fit testing only and is not intended for regular use. Please also be advised that a waiver is required to be submitted for this request.

Certain PPE is only available in the Provincial Stockpile as either aged, expired or donated. When requests are being assessed, providing PPE that is not aged, expired or donated will always be the first option considered. In those cases where that is not an option for the PPE requested, please confirm if your organization is willing to receive aged, expired or donated supplies below.

Aged Donated Expired No

The provider will receive a copy of the waiver ([Agreement for Expired or Donated PPE](#)) in the automated email generated upon submission of this request.

- xix. Complete the rest of the form, ensuring that all mandatory form fields have been completed prior to submitting the form.
